

ADMIN USER MANUAL

JTMK | DFT50114 INTEGRATED PROJECT

A practical guide to administering student accounts, projects, supervisor assignments, external panel QR batches, reports, and fixed system settings.

This PDF is a standalone reference copy and is not linked from the system menu.

1. Access and navigate the Admin Panel

- Sign in with an account assigned the Admin role. The Admin Panel is restricted to authorized administrators.
- The left sidebar opens Dashboard, Manage Users, Manage Projects, External Panel QR, Reports, and Settings. Use the sidebar toggle to collapse or open it; on a narrow screen, open it with the menu button.
- The top bar provides theme and language controls, Home, the signed-in account, and Profile. Use Logout in the sidebar when finished, especially on a shared computer.

2. Dashboard overview

- Dashboard shows counts for JTMK students, supervisors/lecturers, and registered projects. Overall Project Status separates Draft, Submitted, and Approved registrations.
- Top 5 Project Ranking summarizes the highest overall panel-mark results when evaluation data exists. Select View Full Ranking to open the batch-based report.
- Panel's Choices shows a count of projects selected by the panel. Select Open Panel's Choice Report to inspect the report. Counts refresh from the database when the page is loaded.

3. Manage JTMK users

- Open Manage Users. Find Student searches by name, IC number, or matric number. Enter at least two characters; results show up to 20 matches, so refine the query if needed.
- To import students, prepare a CSV or XLSX file up to 5 MB with Name, IC No, Matric No, Session, and Department columns. Choose the file and select Import Students.
- Only rows marked JTMK are imported. Other departments are ignored. Rows missing required fields, containing invalid matric numbers, or duplicating an IC, matric number, or generated email are skipped and listed in the result message.
- Imported student accounts use the IC number as the initial username and password. Passwords are stored as secure hashes. Tell students to change the initial password after their first sign-in; handle source files and IC data securely.
- The student table is grouped by academic session. Use Edit to update an eligible student record. Delete is blocked if the student is linked to a project, group membership, or supervisor assignment.
- The Lecturers / Supervisors table is a directory view. This page imports students and does not provide a create-supervisor form.

4. Manage projects and approvals

- Open Manage Projects to review JTMK DFT50114 groups, project title, category, academic session, registration status, members, current supervisor, and individual Demo 1/Demo 2 statuses.
- To assign or change a supervisor, select a JTMK supervisor in the project card and select Assign SV. The assignment applies to the whole group and updates member-to-supervisor assignments.

- Only projects with Submitted status show the Approve button. Review the project details and confirm before approving. The status changes to Approved and the dashboard count updates on reload.
- Draft projects do not show Approve. If the project is no longer Submitted, the update is rejected; reload the page and check its current status.
- This page monitors Demo 1 and Demo 2 verification statuses. It is not the panel Demo 3 scoring form.

5. Generate External Panel QR links

- Open External Panel QR. The page loads current DFT50114 project groups from the latest academic session with group numbers.
- Generate QR creates one shared QR for all groups. Every external panel can use that link. The link is valid for seven days.
- To divide groups, open Set up split QR batches. Enter the total number of panel members and the number of QR batches. For each batch, set how many groups and panel members it receives; the page previews the included group numbers.
- Each split batch must contain at least one group and at least two panel members. Group counts across batches must add up to all available groups. Panel assignments must cover the total number of panel members; a panel member may be assigned to more than one batch.
- Check the group and panel totals before selecting Generate Split QRs. Each QR is a separate panel session and is valid for seven days. When codes appear, share the correct QR or link only with the assigned panel members.
- Use the copy button to copy a link. If there are no current groups or the QR setup reports an error, check the project data and migration setup before retrying.

6. Reports and evaluation data

- Reports contains Projects by Category, Project Registration Status, and the Demo Verification Summary for Demo 1 and Demo 2.
- Project Ranking by QR Batch lists QR batches that have evaluation marks. The newest evaluated batch is selected by default; use the dropdown to inspect another evaluated batch and Show Ranking to refresh the table.
- If a batch has no assessed groups, the ranking table reports that no group has been evaluated. Rankings are calculated from the panel scores submitted through the selected batch.
- Panel's Choices reports the star selections associated with the most recently evaluated batch. Star selections are separate from panel scores.
- External Panel Demo 3 Evaluations shows projects assigned to the latest generated QR batch and the submissions available for those projects. Open Panel breakdown to inspect an individual submission, criteria, scores, and comments.

7. System Settings

- Settings is a read-only summary of the fixed system configuration: SPInE Politeknik Besut, JTMK Information Technology, DFT50114 Integrated Project, JTMK IT project scope, and the configured assessment model.
- Account, project, and supervisor data are managed in their respective Admin pages. Settings does not provide editable configuration fields.

8. Admin profile and account safety

- Open the profile from the name or avatar in the top bar. The full name is read-only. IC number and email can be updated if valid and not already used by another account.

- An optional new password must contain at least eight characters. Leave it blank to keep the current password. A profile image must be JPG, PNG, or WEBP and no larger than 2 MB.
- Review changes before selecting Save Profile. If the email or IC number is already registered, resolve the duplicate before trying again.
- Use the confirmation prompts for approval, deletion, and logout. Do not share QR links publicly; they allow access to external evaluation for the groups assigned to that QR.

9. Quick troubleshooting

- Import failed: confirm the file is CSV or XLSX, below 5 MB, and has the required columns. Review skipped-row messages for invalid or duplicate data.
- No student search results: enter at least two characters and check the spelling, IC number, or matric number.
- Cannot delete a student: the account is linked to a project, group, or supervisor assignment. Review those relationships before taking action.
- QR generation fails: confirm current groups exist, group counts cover every project, and each split batch has at least two panel members.
- Ranking is empty: select a batch with submitted panel evaluations. Newly generated QR batches do not rank until panels submit scores.
