

SPInE STUDENT PROJECT SYSTEM

PANEL USER MANUAL

EXTERNAL PANEL | DEMO 3 DFT50114

A complete guide to opening a QR link, selecting groups, using Panel's Choice, and submitting Demo 3 scores.

1. Open the QR link and register

- Scan the QR code or open the link provided by the administrator. Each QR shows only the groups assigned to that batch and remains valid until its expiry date.
- Enter your Panel Name. Enter an email if requested; it is optional unless the form marks it as required. Select Continue to Groups.
- Use the same name and email throughout your evaluations. The system uses these details to identify your submissions across QR links.
- If the panel places for a QR are full, the link has expired, or no groups are listed, contact the administrator.

2. Group list and Panel's Choice

- Group List shows the projects included in the QR. Check the title, leader, and members before opening a group.
- Select Assess Group to open the scoring form. A Complete label means your identity has already submitted an evaluation for that group.
- Select the star icon to add a project to Panel's Choice. Select it again to remove the choice. The star is saved for that QR batch.
- The star is a favourite selection, not a mark. Selecting a star does not submit scores, and submitting scores does not automatically select a star.

3. Complete the Demo 3 scoring form

- Check the project title, supervisor, student names, and matric numbers. If the wrong group is shown, return to the list and open the correct one.
- There are eight criteria. For every criterion, select a score of 1, 2, 3, or 4 for every student in the group. All students must have a score for every criterion.
- Use Criteria 1 to 8 tabs, Previous, or Next Criteria to move through the form. The progress bar shows how many criteria are complete.
- Read the performance descriptions shown under each criterion before selecting a score. Do not choose a number without checking the rubric description.
- Add Comments / Feedback if needed. Comments do not replace the criterion scores.

4. The eight criteria and score calculation

- Project achievement and objective: assess how much of the project is complete and whether its objectives are achieved.
- User Requirements: check how well the identified user requirements are met.
- Construction and functionality: assess how the system was built and how it works.
- Feasibility: assess whether the project can be built and implemented.

- Originality: consider whether the project idea is genuine and not copied.
- Marketability: consider evidence such as market surveys, clients, laboratory tests, MyIPO, or testimonials.
- Creativity: assess the originality and inventiveness of the ideas.
- System Security, Features and Testing: assess user controls, validation, features, and testing evidence.
- Each criterion contributes 12.5% to the total score out of 100. The system calculates the Demo 3 score out of 15 automatically; do not calculate or enter the total manually.

5. Save scores and finish the batch

- Before submitting, confirm all eight criteria have scores for every student and that the correct group is open.
- Select Done - Save Scores. Wait for the Scores saved message. If the system asks for more scores, return to the incomplete criteria.
- Return to Group List and continue with projects not marked Complete. Do not submit another evaluation for a group already assessed.
- When every group in the QR batch is complete, the page shows Evaluation Complete or a Done button. Select Done if it appears.

6. Troubleshooting and duplicate evaluations

- The same panel name and email cannot assess the same group more than once, even through another QR. If the system says the group has already been assessed, the evaluation is already recorded.
- If the form will not save, check that every student has eight scores. Read the error message before trying again.
- If the page stops after saving, return to Group List and check for Complete before submitting anything again.
- If a group is missing, use the QR for the correct batch or contact the administrator. Do not use an expired QR link.
