

SPInE STUDENT PROJECT SYSTEM

STUDENT USER MANUAL

JTMK | DFT50114

A step-by-step guide to registering a project, managing your group, submitting documents, and checking progress in SPInE.

1. Sign in and use the Dashboard

- Open SPInE and select Login. Enter your registered student account. If you cannot access your account, contact the system administrator and do not share your password.
- After signing in, open Dashboard from the side menu. Project Status shows Not Registered if you have no project, In Progress while work is ongoing, or Complete & Ready when the project record is marked complete.
- Total Score and Project Rank appear when results are available. Before marks are recorded, the page may show Not Evaluated Yet or a dash.
- The document status area shows Uploaded or Not Uploaded for each category. The project summary shows your title, session, and supervisor when assigned.

2. Register a project or join a group

- Open My Project. If you are not yet in a group, choose Create New Project or Join Existing Project.
- For a new project, enter a clear title, select the closest category, and describe the problem, objectives, and proposed solution. The academic session is supplied by the system.
- Tick the declaration confirming the title is original and has not been registered by another group. Review the details, then select Register Project.
- To join a group, select a project with an available place and select Join This Group. The list shows current membership. A group can have up to three students.
- A student can belong to only one project group. After registration, My Project shows the title, category, your Leader or Member role, and group members. If you already belong to a group, the page shows group details instead of the registration form.
- Project categories include Multimedia and Animation, Internet of Things, Artificial Intelligence, Software Application, Web Application, Mobile Application, Networking System, Hardware Design, Robotic Programming, Information System, Security System, Data Management & Visualization, and Data Analysis.

3. Upload and check project documents

- Open Upload Documents. You must belong to a project group before uploading. Select a document category, choose a PDF, DOCX, or ZIP file, then select Upload Now. Follow the file-size limit shown on screen.
- Categories and weights shown by the system are Proposal Presentation 10%; Demo 1 10%; Demo 2 10%; Demo 3 15%; Final Presentation - Poster 15%; Final Presentation 15%; and Technical Report 15%. The interface may identify these with rubric codes A to F.
- Each document category is submitted once per group. If another member has already submitted a category, that option is disabled for the rest of the group.
- Submitted Documents List shows the category, status, and upload date. Pending means awaiting review; Approved means accepted; Rejected means action is required. Select Download to retrieve a submitted file.

- If the wrong category was selected or the file is missing from the list, read the on-screen message and check the status before trying again. Avoid uploading repeated copies.

4. Check marks and Demo status

- Open Evaluation Marks to view the supervisor verification status for Demo 1 and Demo 2. Pending means no decision has been saved; Passed means passed; Not Passed means not passed.
- This page shows milestone status, not a breakdown of all numerical marks. Total project marks and rank are shown on the Dashboard when results are available.
- Demo 3 marks come from an external panel evaluation through a QR link. Uploading a document alone does not create a Demo 3 score.
- If a status does not match your understanding or marks are not yet available, check again later or contact your supervisor.

5. Deadlines, groups, and past projects

- Open Deadline Reminders to see the document type, instructions, due date, and time. Active means the deadline is open; Expired means it has passed; Waiting for Admin means it has not been announced.
- Deadlines do not automatically determine marks. Check both the date and exact time for each document.
- Open Group List to find projects by title, student name, or matric number. Select Search to filter and Reset to clear the search.
- Past Projects Archive is for viewing earlier projects as references. Do not confuse an archived project with your current group.

6. Student checklist and help

- Before finishing, confirm you are in the correct group, all members are listed, required documents have been uploaded, and each upload status is correct.
- Check Dashboard and Reminders regularly. Keep a copy of original files and tell your supervisor if the title, members, or project category needs correction.
- If an error appears, note the page name and message. Select Logout after using a shared computer.
