

SUPERVISOR USER MANUAL

JTMK | DFT50114

A step-by-step guide to monitoring supervised groups, reviewing documents, and updating Demo milestone statuses.

1. Sign in and use the Dashboard

- Sign in with an account assigned the Supervisor role. Confirm the displayed account name before reviewing student records.
- Dashboard shows the number of assigned students and groups, plus a Recent Student Submissions & Groups summary. This summary is not the full list.
- Select View All or open Supervised Projects to find a specific group. Use the side menu to switch pages.

2. Find and review supervised groups

- Open Supervised Projects. The list shows project title, group leader, member names and matric numbers, category, session, and department.
- Use the search box to find a project title, student name, or matric number. Select Search Project to filter; clear the search to see the full list again.
- Check the session and member details to confirm you selected the correct group. If a group is missing, ask the administrator to verify its supervisor assignment.

3. Review student documents

- Open Review Documents and select a project from the supervised project list.
- The document table shows category, file name, status, and upload date. If no files have been submitted, the page shows No documents submitted.
- Select View to open a document in a new tab. Return to the project list to choose another group.
- This page is read-only. It does not provide a numerical marks form or controls to change a document status.

4. Update Demo 1 and Demo 2 status

- Open Student Verification. The list shows student name, matric number, session, and Demo 1 and Demo 2 statuses.
- Select Milestones on the correct student row. Choose Passed or Not Passed for the Demo that has been reviewed.
- If only one Demo needs updating, select its status and leave the other field blank. The system saves only the status you selected.
- Select Save Status and wait for the success message. Return to the student list to confirm the updated status.
- Milestone verification is a status, not a numerical mark. Students see the same result on their Evaluation Marks page.

5. Marks and milestone status

- Demo 3 scores are entered by external panel members through a QR link. Document review and Demo 1/Demo 2 status are separate workflows.
- Students can check Demo 1 and Demo 2 statuses on Evaluation Marks. Use Student Verification to update these statuses after reviewing the student.

- The Supervisor Project Marks / Evaluate Project form is not available through the current route and may redirect to Student Verification. Do not use Passed or Not Passed as a replacement for numerical marks.

6. Past projects and deadlines

- Open Past Projects to view earlier project records.
- Open Deadline Reminders to check schedules published by the administrator.
- If a student is missing or a status looks incorrect, verify the matric number and ask the administrator to check the assignment record.

7. Supervisor checklist

- Before saving a status, confirm the student and Demo are correct. Choose Passed or Not Passed based on your review.
- When reviewing a document, confirm it opens and belongs to the expected category. Review Documents is for viewing files only.
- Log out after finishing, especially on shared computers. If a page is unavailable, note the menu and message and report it to the administrator.
